PROFESSIONAL SUMMARY

Software developer with over a year of hands-on work on production systems in regulated domains: a cross-border remittance platform with KYC and compliance requirements, and a multi-tenant hospital management system in daily use. Work mainly in Java/Spring Boot and React, implementing REST API features, writing unit tests, debugging defects from logs, and documenting APIs for other developers. Careful with personal and financial data under access-control rules; a finance background adds an eye for accuracy. Looking to grow under senior engineers while delivering tested, reviewable, well-documented code for public systems.

SKILLS

Programming: Java (OOP), JavaScript, SQL, Python, Bash
API Development: Spring Boot, Spring Data JPA/Hibernate, RESTful API design, webhooks, Node.js/Express
Unit Testing & Debugging: JUnit, Postman, log-based debugging with Grafana, reproducing and fixing defects
Git & Workflow: Git/GitHub (branches, pull requests, code review), Docker, Linux, CI/CD pipelines(basic), AWS (basic)
Documentation: Swagger/OpenAPI, README and setup guides, code comments
Security & Data Handling: JWT (access/refresh tokens), role-based access control, server-side payment verification, validated database migration
Frontend: React (hooks, routing, forms & validation), responsive UI, REST API integration
Databases: MySQL, PostgreSQL, MongoDB, Redis — schema design, indexing, query optimization

EXPERIENCE

Software Developer — Lumbini Group Sep 2025 – Present

- Implement assigned features and REST APIs in Java/Spring Boot for a cross-border remittance platform (three independently deployed microservices) and a multi-tenant hospital management system, consumed by React frontends.
- Unit-test service logic with JUnit and verify endpoints in Postman before code review; apply reviewer feedback on validation, security and code quality.
- Resolve production defects by tracing failed transactions through Grafana logs, reproducing and fixing the issue, and speeding up slow endpoints with MySQL indexing; escalate critical issues with written status updates.
- Document endpoints with Swagger/OpenAPI and work with compliance teams to turn requirements into API designs and features.
- Secure APIs with JWT and role-based access, integrate payment gateways, KYC providers and webhooks, and run validated data migrations to protect transaction and customer records.

Products contributed to:

- **Legal Remit (legalremit.com)** *(Java, Spring Boot, MySQL, React, Grafana)* — remittance platform; services for onboarding/KYC, compliance and transfer tracking.
- **Hospital Management System** *(Java, Spring Boot, JPA, MySQL, React)* — multi-tenant SaaS for patient records, appointments, and billing with role-based access; in daily hospital use.
- **Fly Lumbini (flylumbini.com)** *(Node.js, Express, React)* — flight search, booking and payment-status APIs.

Finance Assistant — Skyline Travel and Tours Pvt. Ltd. Nov 2022 – Oct 2024

- Reconciled daily financial transactions and reports, tracing mismatches between payments and records and keeping records accurate; handled customer and vendor communication.

PROJECTS

Invest Care Limited — Corporate Website & CMS *(Node.js, Express, CI/CD, React)*

- Public website and admin CMS for an investment holding company: React frontend, Node.js/Express content APIs, and authenticated admin access for managing site content.
- Automated deployment through a CI/CD pipeline so changes are built and released consistently.
- **Live:** investcare.com.np

DKP E-commerce Store — Full Stack *(React, Node.js, Express, MongoDB, Redis, Docker)*

- Responsive React storefront (catalog, cart, checkout, order history) on self-built REST APIs, with JWT-protected routes and loading/error states.
- Integrated PayPal and Khalti with server-side payment verification; added Redis caching for product queries.
- **Live:** dkp-ecommerce-store-frontend.onrender.com

RAG Document Assistant *(Python, LLM API, embeddings, vector store)*

- Document Q&A: uploads are chunked and embedded; relevant passages are retrieved and passed to an LLM so answers stay grounded and cited.

EDUCATION

Bachelor of Information Management (BIM) — Tribhuvan University 2022 – 2026

IT coursework: Java & OOP, Data Structures & Algorithms, DBMS, Web Technology, Artificial Intelligence.
